Notes:

x Data suppressed.

<sup>a</sup>Percent of population = Number of infants and toddlers ages birth through 2 receiving early intervention services divided by the birth through 2 population multiplied by 100.

<sup>b</sup>DIF = Difference from national baseline. This column shows the difference between the percent of the infant and toddler population served in the state and the percent served in the nation as a whole. A positive DIF value indicates that the state serves a higher percent of its infant and toddler population than is true for the nation as a whole. Because criteria for Part C eligibility vary widely across states, differences in identification rates on this table should be interpreted with caution. See Part C Child Count Data Notes for an explanation of individual state differences on how data are reported.
