U.S. Bureau of the Census. For the 50 states and D.C., population data retrieved August 2005 from [http://www.census.gov/popest/states/files/SC-EST2004-AGESEX\\_RES.CSV](http://www.census.gov/popest/states/files/SC-EST2004-AGESEX_RES.CSV). For American Samoa, Guam, and Northern Marianas, population data are from Census 2000, Summary File 1, Table P7. For Puerto Rico they are from Census 2000, Summary File 1, Table P14. For Virgin Islands, they are from Census 2000, Summary File 1, Table P9. Notes:

x Data suppressed.

N = Number of infants and toddlers receiving early intervention services.

% = Percent of population. This is equal to the number of infants and toddlers ages birth through 2 receiving early intervention services divided by the birth through 2 population multiplied by 100.

DIF = Difference from national baseline. This column shows the difference between the percent of the infant and toddler population served in the state and the percent served in the nation as a whole. A positive DIF value indicates that the state serves a higher percent of its infant and toddler population than is true for the nation as a whole. Because criteria for Part C eligibility vary widely across states, differences in identification rates on this table should be interpreted with caution. See Part C Child Count Data Notes for an explanation of individual state differences on how data are reported.

\*Change = 2004 percent - 2000 percent.

For Virginia, 971 children were added for 2000, 971 children were added for 2001, and 984 children were added for 2002 to adjust for children under the age of 3 who were served under IDEA, Part B.
